Case Study 1

SkyWings Travel Agency - Booking & Revenue Analytics

Industry: Travel & Tourism

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

SkyWings Travel Agency operates across 12 cities and manages holiday packages, flight bookings, and hotel reservations for over 50,000 customers per year. The management team has noticed a decline in bookings during off-peak seasons and wants to understand revenue trends, top-performing packages, and customer demographics to drive targeted marketing campaigns. The agency has now implemented IBM Cognos Analytics and wants its analysts to build a complete BI solution.

Dataset / Data Available

- Booking ID, Customer Name, Age Group, City, Package Type (Flight/Hotel/Combo)
- Booking Date, Travel Date, Destination, Number of Travellers
- Package Cost, Discount Applied, Final Revenue, Payment Mode
- Agent Name, Branch City, Season (Peak/Off-Peak), Customer Rating (1–5)

Case Study Questions

Q1 **[Reporting]** Create a detailed tabular report in IBM Cognos showing total bookings and revenue grouped by Package Type (Flight, Hotel, Combo). Apply a Header with the agency name and report date, a Footer with page number, and use Blue font color for column headers with Arial font, size 12. Add a prompt so managers can filter the report by Branch City.

Q2 **[Reporting]** Build a summary report listing the Top 10 Destinations by Revenue. Apply Conditional Styling so destinations generating revenue above ₹5,00,000 appear in Green, between ₹2,00,000–₹5,00,000 in Amber, and below ₹2,00,000 in Red. Add the report to Team Content with a meaningful description.

Q3 **[Reporting]** Using Report Visualize Prompt, create a visualization report that allows the end user to select the chart type (Bar, Line, or Pie) to view Monthly Revenue Trends for the current year. Summarize the total revenue and average booking value at the bottom of the report.

Q4 **[Exploration]** Using Cognos Analytics Exploration, upload the agency's booking dataset and explore the relationship between Customer Age Group and Package Type. Identify which age group generates the highest revenue during Peak Season versus Off-Peak Season and document your key findings.

Q5 **[Dashboard]** Design an Executive Dashboard for SkyWings management containing: (1) A KPI tile for Total Revenue this year, (2) A Bar chart showing Revenue by Destination, (3) A Line chart for Monthly Booking Trends, (4) A Pie chart for Package Type split. Add a City filter widget so the entire dashboard responds to the selected city.

Q6 **[Story Making]** Create a Cognos Analytics Story (presentation) for the SkyWings Annual Business Review with the following scenes: Scene 1 — Company Overview & Total Bookings, Scene 2 — Top Destinations Performance, Scene 3 — Peak vs Off-Peak Revenue Comparison, Scene 4 — Customer Satisfaction Ratings, Scene 5 — Recommendations for Off-Peak Strategy. Add meaningful text annotations to each scene.

Case Study 2

MediCare Hospital - Patient & Operations Analytics

Industry: Healthcare

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

MediCare Hospital is a multi-speciality hospital with 500 beds, 40 departments, and over 1,200 staff members. The hospital administration is concerned about rising patient wait times, bed occupancy rates exceeding 90%, and increasing re-admission rates. The Chief Medical Officer wants a data-driven view of hospital operations, doctor performance, and patient outcomes to improve service quality and resource allocation using IBM Cognos Analytics.

Dataset / Data Available

- Patient ID, Name, Age, Gender, Blood Group, Ward, Admission Date, Discharge Date
- Department, Doctor Name, Diagnosis, Treatment Type, Surgery Flag (Yes/No)
- Bed Occupancy Status, Wait Time (minutes), Length of Stay (days)
- Bill Amount, Insurance Covered, Patient Satisfaction Score (1–10), Re-admission Flag

Case Study Questions

Q1 **[Reporting]** Create a List Report showing Patient ID, Department, Doctor Name, Length of Stay, and Bill Amount. Apply a Header with the hospital name and report generation date, Footer with confidentiality notice and page number. Use Calibri font size 11, Dark Red color for re-admitted patients using Conditional Styling. Add a prompt to filter by Department.

Q2 **[Reporting]** Build a Grouped Summary Report showing Average Wait Time and Average Length of Stay by Department. Sort departments by Average Wait Time in descending order. Add subtotals per department group. Use the Report Summarize feature to show overall hospital averages at the report footer.

Q3 **[Reporting]** Create a Visualization Report using Report Visualize Prompt where users can select a chart type to view Bed Occupancy Rate by Ward over the last 6 months. Apply Conditional Styling to highlight any ward exceeding 90% occupancy in Red. Add a text summary of the top 3 most occupied wards.

Q4 **[Exploration]** Use Cognos Exploration to analyze the Patient Satisfaction Score dataset. Explore correlations between Wait Time and Patient Satisfaction Score. Identify which departments have the lowest satisfaction scores and what common factors (doctor, wait time, length of stay) contribute to them. Document your exploration findings.

Q5 **[Dashboard]** Build a Hospital Operations Dashboard with: (1) KPI tiles for Bed Occupancy Rate, Average Wait Time, and Re-admission Rate, (2) A Bar chart for Patient Count by Department, (3) A Line chart for Monthly Admissions Trend, (4) A Table of Top 5 Doctors by Patient Count. Include a Date Range filter for the entire dashboard.

Q6 **[Story Making]** Create a Cognos Story for the Hospital Board Meeting with 5 scenes: Scene 1 — Hospital Overview & Key Metrics, Scene 2 — Department-wise Patient Load, Scene 3 — Wait Time & Bed Occupancy Crisis Areas, Scene 4 — Patient Satisfaction Analysis, Scene 5 — Action Plan & Recommendations. Export the story as a PDF for board presentation.

Case Study 3

FreshMart Supermarket - Sales & Inventory Analytics

Industry: Retail

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

FreshMart is a supermarket chain with 35 outlets across 8 states in India. The chain sells groceries, fresh produce, dairy, bakery, and household items. The operations head has reported inconsistencies in stock levels — some outlets are overstocked while others face frequent stockouts. The sales team also wants to identify slow-moving products and top-selling categories to optimize purchasing decisions using IBM Cognos Analytics.

Dataset / Data Available

- Product ID, Product Name, Category, Sub-Category, Brand, Unit Price, Cost Price
- Outlet ID, Outlet City, Outlet State, Outlet Size (Small/Medium/Large)
- Sale Date, Quantity Sold, Total Sales Value, Discount Applied, Profit
- Stock Opening, Stock Closing, Reorder Level, Supplier Name, Days Out of Stock

Case Study Questions

Q1 **[Reporting]** Create a Sales Summary Report grouped by Category and Sub-Category showing Total Sales, Total Profit, and Profit Margin %. Add a calculated field for Profit Margin % = (Profit / Sales) * 100. Format the report with a Header (FreshMart logo text + report date), Footer (page number + 'Confidential'), bold dark green headers, and a prompt for Outlet State selection.

Q2 **[Reporting]** Build a Slow-Moving Products Report listing products where Quantity Sold is below 50 units in the last month. Apply Conditional Styling: Red for 0–20 units, Amber for 21–50 units. Add prompts for Category and Outlet City. Use font Trebuchet MS, size 11 for the report body. Include a count of total slow-moving products as a summary.

Q3 **[Reporting]** Using Report Visualize Prompt, build a visualization that allows managers to choose between a Bar chart and a Line chart to view Weekly Sales Trends across all outlets. Summarize the highest and lowest sales weeks using a text object at the report bottom. Add Conditional Styling to weeks with sales below the monthly average.

Q4 **[Exploration]** Using Cognos Exploration on the FreshMart dataset, explore the relationship between Outlet Size and Profit Margin. Investigate whether larger outlets consistently outperform smaller ones. Also explore how Days Out of Stock correlates with Total Sales loss. Capture and annotate all key exploration charts in your submission.

Q5 **[Dashboard]** Design a Store Manager Dashboard containing: (1) KPI tiles — Total Sales, Total Profit, and Stock-out Incidents this month, (2) A Bar chart for Sales by Category, (3) A Map or table of Top 5 Outlets by Revenue, (4) A Pie chart for Category-wise Sales Split, (5) An Inventory Alert table showing products below reorder level. Add outlet and date filters.

Q6 **[Story Making]** Create a Cognos Analytics Story for the FreshMart Quarterly Business Review with scenes: Scene 1 — Sales Performance Overview, Scene 2 — Top and Bottom Performing Outlets, Scene 3 — Category Revenue Breakdown, Scene 4 — Inventory & Stockout Impact Analysis, Scene 5 — Recommendations to Reduce Stockouts and Boost Slow Movers.

Case Study 4

BrightPath University - Student Performance & Academics Analytics

Industry: Education

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

BrightPath University offers 20 undergraduate and postgraduate programs across 6 faculties. The academic council has raised concerns about declining pass rates in certain departments, high dropout rates among first-year students, and poor attendance correlating with exam failures. The Vice Chancellor wants the BI team to build an IBM Cognos Analytics solution to monitor student performance, faculty effectiveness, and departmental outcomes.

Dataset / Data Available

- Student ID, Name, Gender, Age, Department, Program, Year of Study, Enrollment Year
- Subject Name, Faculty Name, Internal Marks, External Marks, Total Marks, Grade, Pass/Fail
- Attendance Percentage, Assignment Submission Rate, Scholarship Flag (Yes/No)
- Dropout Flag, Backlog Count, Placement Status, Placement Package (LPA)

Case Study Questions

Q1 **[Reporting]** Create a Student Performance Report showing Student ID, Name, Department, Total Marks, Grade, and Pass/Fail status. Apply Conditional Styling: Green for Pass with Distinction (>75%), Blue for Pass (50–75%), Red for Fail (<50%). Add a Header with the university name and academic year, Footer with page number. Add prompts for Department and Year of Study selection.

Q2 **[Reporting]** Build an Attendance vs Performance Correlation Report listing students with attendance below 75%. Add a calculated column showing the Performance Risk Flag = 'High Risk' if attendance < 60%, 'Medium Risk' if 60–75%. Apply matching Conditional Styling colors. Use Georgia font, size 11, and add a summary showing total at-risk students per department.

Q3 **[Reporting]** Using Report Visualize Prompt, create a Subject-wise Performance Visualization where faculty members can select a chart type (Bar or Column) to compare average marks scored across subjects. Summarize the top 3 and bottom 3 subjects by average marks using text objects in the report footer.

Q4 **[Exploration]** Use Cognos Exploration on the student dataset to explore the relationship between Attendance Percentage and Total Marks. Further explore how Backlog Count impacts Placement Status. Identify departments with the highest dropout rates and common attributes of dropped-out students. Present your findings with annotated charts.

Q5 **[Dashboard]** Design a University Academic Dashboard with: (1) KPI tiles for Overall Pass Rate, Average Attendance, and Placement Rate, (2) A Bar chart for Department-wise Pass/Fail Count, (3) A Line chart for Year-wise Enrollment Trend, (4) A Pie chart for Grade Distribution (A/B/C/D/F), (5) A table of Top 10 Students by Total Marks. Add Department and Year of Study filters.

Q6 **[Story Making]** Build a Cognos Story for the Academic Council Annual Report: Scene 1 — University Overview & Enrollment Statistics, Scene 2 — Department-wise Academic Performance, Scene 3 — Attendance & At-Risk Student Analysis, Scene 4 — Placement & Career Outcome Summary, Scene 5 — Faculty Effectiveness Analysis, Scene 6 — Recommendations to Improve Pass Rate & Reduce Dropouts.

Case Study 5

QuickCart E-Commerce - Order & Customer Analytics

Industry: Online Shopping / E-Commerce

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

QuickCart is a fast-growing Indian e-commerce platform selling electronics, fashion, home decor, books, and groceries. With 2 million registered users and 15,000 daily orders, the management is facing challenges with high cart abandonment rates, increased product return rates, and delayed deliveries. The Customer Experience team wants IBM Cognos Analytics dashboards and reports to understand buying patterns, return reasons, and delivery performance.

Dataset / Data Available

- Order ID, Customer ID, Customer City, Age Group, Gender, Registration Date
- Product ID, Product Category, Product Name, Seller Name, Unit Price, Quantity Ordered
- Order Date, Delivery Date, Expected Delivery Date, Delivery Status (On-Time/Delayed/Failed)
- Payment Mode, Cart Value, Discount Applied, Return Flag, Return Reason, Customer Rating

Case Study Questions

Q1 **[Reporting]** Create an Order Summary Report grouped by Product Category showing Total Orders, Total Revenue, Return Count, and Return Rate %. Add a prompt for Customer City and Date Range. Apply Conditional Styling on Return Rate: Red if > 20%, Amber for 10–20%, Green for < 10%. Header must include QuickCart branding text; Footer must show report timestamp and page number.

Q2 **[Reporting]** Build a Delayed Deliveries Report listing all orders where Delivery Status = 'Delayed' or 'Failed'. Include Order ID, Customer City, Product Category, Expected Date, Actual Date, and Days Delayed (calculated). Apply Conditional Styling: Dark Red for delays > 7 days. Use Verdana font, size 11. Add a summary of total delayed orders and average delay days.

Q3 **[Reporting]** Using Report Visualize Prompt, create a visualization allowing managers to view Monthly Order Trends by selecting a chart type (Line or Bar). Summarize the peak order month and lowest order month as text. Add a second visualization for Top 5 Product Categories by Revenue using the same prompt approach.

Q4 **[Exploration]** Use Cognos Exploration to analyze return behavior. Explore which Product Categories have the highest Return Rate and whether Return Reason correlates with Product Category or Seller Name. Also explore the relationship between Payment Mode and Cart Value. Annotate your findings and identify the top 3 actionable insights.

Q5 **[Dashboard]** Design a QuickCart Operations Dashboard with: (1) KPI tiles — Total Orders, Total Revenue, Return Rate %, and On-Time Delivery Rate, (2) A Bar chart for Orders by Category, (3) A Line chart for Daily Order Volume Trend, (4) A Pie chart for Payment Mode Distribution, (5) A table of Top 10 Customers by Total Spend. Include Category and Date Range filter widgets.

Q6 **[Story Making]** Create a Cognos Story for QuickCart's Quarterly Performance Presentation: Scene 1 — Business Overview & Key Metrics, Scene 2 — Top-Selling Products & Categories, Scene 3 — Return Rate Analysis & Root Causes, Scene 4 — Delivery Performance & Delay Hotspots, Scene 5 — Customer Satisfaction & Rating Analysis, Scene 6 — Strategic Recommendations to Reduce Returns & Improve Delivery.

Case Study 6

SwiftMotors - Vehicle Manufacturing & Quality Analytics

Industry: Automobile Manufacturing

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

SwiftMotors is an Indian automobile manufacturer producing sedans, SUVs, and electric vehicles at 3 plants — Pune, Chennai, and Ahmedabad. The production head is concerned about rising defect rates, increasing production downtime, and escalating raw material costs. The Quality Control team wants to use IBM Cognos Analytics to monitor production efficiency, defect patterns, and supplier performance to achieve Six Sigma quality standards.

Dataset / Data Available

- Vehicle ID, Model Name, Vehicle Type (Sedan/SUV/EV), Plant Location, Production Date
- Shift (Morning/Afternoon/Night), Assembly Line, Supervisor Name, Workers Count
- Units Produced, Units Defective, Defect Type, Rework Required (Yes/No), Scrap Units
- Raw Material Supplier, Material Cost per Unit, Production Time (hours), Downtime (minutes)

Case Study Questions

Q1 **[Reporting]** Create a Production Quality Report grouped by Plant Location showing Total Units Produced, Total Defective Units, and Defect Rate %. Add a calculated column for Defect Rate = (Defective / Produced) * 100. Apply Conditional Styling: Red for Defect Rate > 5%, Amber for 2–5%, Green for < 2%. Add Header with plant logo text, Footer with page number. Include prompts for Plant and Vehicle Type.

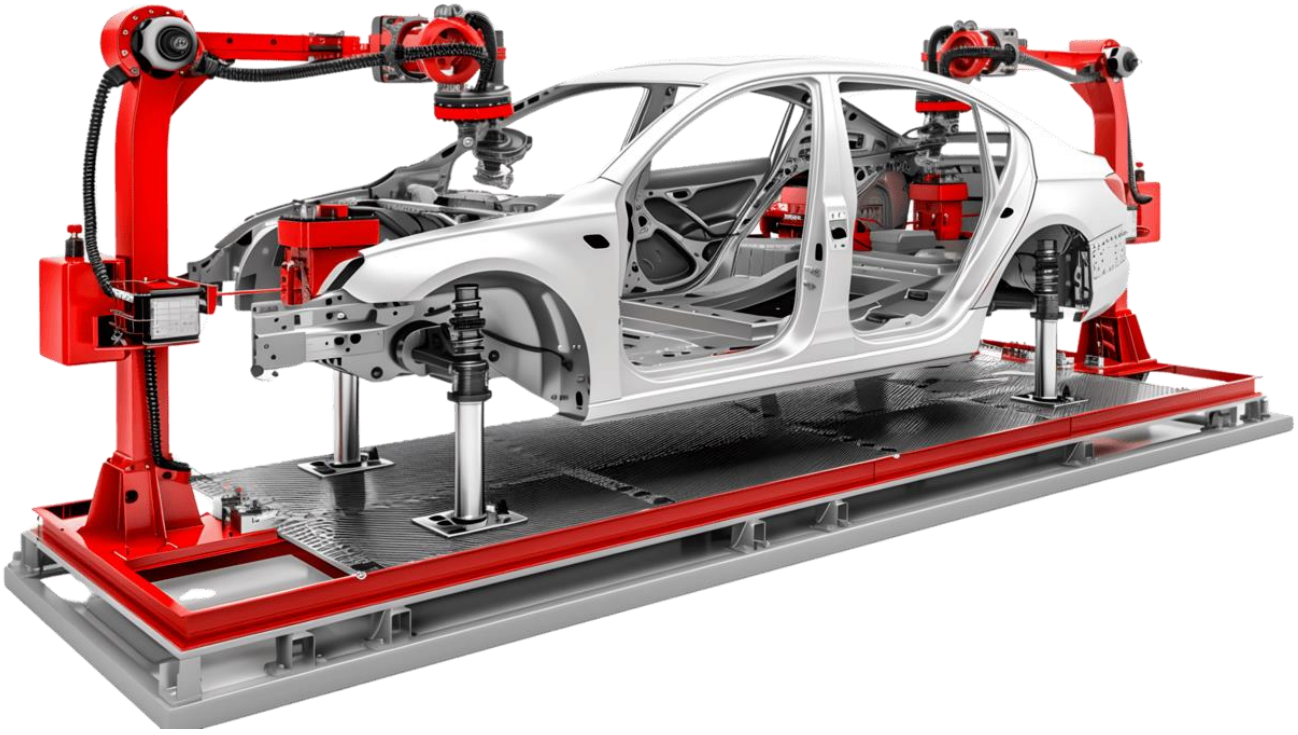

Q2 **[Reporting]** Build a Downtime Analysis Report listing Assembly Lines with total downtime minutes per month. Add a prompt for Plant and Shift selection. Sort by Total Downtime descending. Apply Conditional Styling: lines with downtime > 500 minutes highlighted in Red. Use Tahoma font, size 11. Summarize the total production hours lost due to downtime at the report footer.

Q3 **[Reporting]** Using Report Visualize Prompt, create a visualization where Quality Managers can select chart type to view Defect Type Distribution across all plants. Add a second prompt for Date Range. Summarize the top 3 most frequent defect types as a bullet list text object within the report. Apply font color Navy Blue for all column headers.

Q4 **[Exploration]** Using Cognos Exploration, explore the relationship between Shift Type (Morning/Afternoon/Night) and Defect Rate. Investigate whether specific supervisors or assembly lines are associated with higher defect rates. Also explore the correlation between Raw Material Supplier and Scrap Units. Present key findings with visualizations.

Q5 **[Dashboard]** Design a Manufacturing Operations Dashboard with: (1) KPI tiles — Total Units Produced, Defect Rate %, Downtime Hours, and Scrap Cost, (2) A Bar chart for Units Produced by Plant, (3) A Line chart for Monthly Defect Trend, (4) A Pie chart for Defect Type Distribution, (5) A table for Top 5 Suppliers by Material Cost. Add Plant and Date Range filters.

Q6 **[Story Making]** Create a Cognos Story for the SwiftMotors Board Quality Review: Scene 1 — Production Overview (All 3 Plants), Scene 2 — Defect Rate Analysis by Plant & Shift, Scene 3 — Top Defect Types & Root Cause Patterns, Scene 4 — Downtime Impact on Production Output, Scene 5 — Supplier Performance & Material Cost Analysis, Scene 6 — Quality Improvement Roadmap & Targets.

Case Study 7

NovaTech Mobile - Smartphone Sales & Service Analytics

Industry: Mobile / Electronics Manufacturing

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

NovaTech Mobile is a smartphone brand with manufacturing in Noida and sales across India through 800 retail outlets and its own e-commerce portal. The brand is facing declining customer satisfaction due to increasing service center complaints, high return rates for two flagship models, and inconsistent sales performance across regions. The Business Intelligence team is tasked with building a Cognos Analytics solution to improve sales visibility and service quality.

Dataset / Data Available

- Model Name, Variant (RAM/Storage), Color, MRP, Selling Price, Discount %
- Sale Date, Outlet ID, Outlet City, Region, Sales Channel (Retail/Online)
- Units Sold, Revenue, Return Flag, Return Reason (Hardware/Software/Cosmetic)
- Service Request ID, Issue Type, Resolution Time (days), Customer Satisfaction Score

Case Study Questions

Q1 **[Reporting]** Create a Model-wise Sales Report showing Units Sold, Revenue, Discount Given, and Return Count by Model Name and Variant. Apply Conditional Styling so models with Return Count > 100 appear in Red. Add Header with NovaTech brand text and report month, Footer with page number. Add prompts for Region and Sales Channel. Use Century Gothic font, size 11.

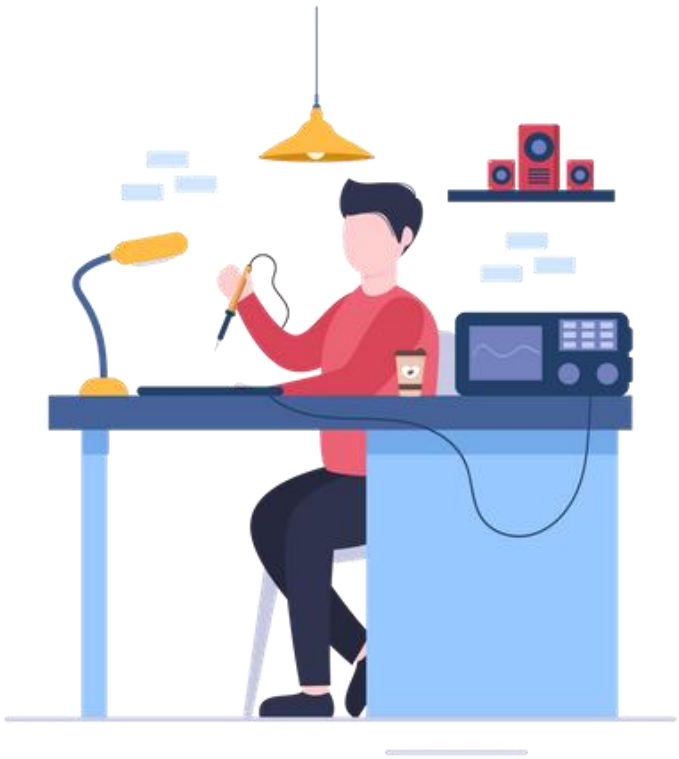

Q2 **[Reporting]** Build a Service Center Performance Report listing Issue Type, Average Resolution Time, and Count of Unresolved Issues per region. Apply Conditional Styling: Red if Average Resolution > 7 days, Amber for 4–7 days, Green for < 4 days. Summarize the total unresolved issues and the region with worst performance at the report footer.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Regional Sales Managers to select a visualization type (Bar or Column) to view Regional Revenue Comparison across all 6 regions. Add a filter prompt for Sales Channel. Summarize top and bottom performing regions as text. Apply Blue font color for all numeric columns.

Q4 **[Exploration]** Using Cognos Exploration, analyze the NovaTech dataset to discover which Model and Variant combination has the highest return rate and why. Explore whether Sales Channel (Retail vs Online) influences return behavior. Also explore how Customer Satisfaction Score correlates with Resolution Time. Document findings with annotated visuals.

Q5 **[Dashboard]** Design a NovaTech Executive Dashboard with: (1) KPI tiles — Total Units Sold, Total Revenue, Return Rate %, Average Satisfaction Score, (2) A Bar chart for Sales by Model, (3) A Line chart for Monthly Sales Trend, (4) A Pie chart for Sales Channel Split, (5) A table for Top 5 Cities by Revenue. Add Region and Model filters to the dashboard.

Q6 **[Story Making]** Create a Cognos Story for NovaTech's Quarterly Sales & Service Review: Scene 1 — Brand Performance Overview, Scene 2 — Top & Bottom Selling Models by Region, Scene 3 — Return Rate Analysis by Model & Channel, Scene 4 — Service Center Efficiency & Issue Resolution, Scene 5 — Customer Satisfaction Trends, Scene 6 — Recommended Actions to Reduce Returns & Improve CSAT.

Case Study 8

GrandStay Hotels - Hospitality & Revenue Analytics

Industry: Hotels & Restaurants

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

GrandStay Hotels is a luxury hotel chain with 12 properties across 6 Indian cities including Mumbai, Delhi, Goa, Jaipur, Bengaluru, and Chennai. The Revenue Management team wants to optimize room pricing strategies after observing inconsistent occupancy rates, declining food & beverage revenue, and poor online review scores at certain properties. IBM Cognos Analytics has been deployed to analyze bookings, guest satisfaction, and F&B performance.

Dataset / Data Available

- Booking ID, Guest Name, Nationality, Arrival Date, Departure Date, Length of Stay (nights)
- Room Type (Standard/Deluxe/Suite), Room Rate per Night, Booking Channel (Online/Direct/Agent)
- F&B Revenue per Stay, Spa Revenue, Total Bill, Discount Applied, Payment Mode
- Property Name, Property City, Room Occupancy Rate %, Guest Rating (1–10), Review Source

Case Study Questions

Q1 **[Reporting]** Create a Revenue Report by Property showing Total Room Revenue, F&B Revenue, Spa Revenue, and Total Revenue per property. Apply Conditional Styling: properties with Guest Rating < 6 highlighted in Red. Add Header with GrandStay Hotels branding, Footer with 'Internal Use Only' and page number. Add prompts for Property City and Booking Channel. Use Garamond font, size 12.

Q2 **[Reporting]** Build a Room Occupancy Analysis Report showing Occupancy Rate % by Room Type and Month. Add a prompt for Property Name and Month selection. Apply Conditional Styling: Occupancy > 80% in Green, 60–80% in Amber, < 60% in Red. Summarize the best and worst performing months at the report footer. Sort by Occupancy Rate descending.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Revenue Managers to select chart type (Bar or Line) to view Monthly Revenue Trends segmented by Property. Add a date range prompt. Summarize Year-to-Date total revenue and Month-over-Month growth % using text objects. Apply Dark Green font color for positive growth values using Conditional Styling.

Q4 **[Exploration]** Using Cognos Exploration on the GrandStay dataset, explore the relationship between Length of Stay and Total Bill. Investigate which Booking Channels generate the highest revenue per booking. Also analyze how Guest Ratings correlate with Room Rate and Room Type. Document insights with annotated exploration charts.

Q5 **[Dashboard]** Design a Hotel Revenue Management Dashboard with: (1) KPI tiles — Total Revenue, Average Occupancy Rate, Average Guest Rating, RevPAR (Revenue per Available Room), (2) A Bar chart for Revenue by Property, (3) A Line chart for Monthly Occupancy Trend, (4) A Pie chart for Booking Channel Split, (5) A table of Top 5 Guests by Total Spend. Add Property and Date filters.

Q6 **[Story Making]** Create a Cognos Story for GrandStay's Annual Hospitality Review: Scene 1 — Chain-wide Revenue & Occupancy Overview, Scene 2 — Property-by-Property Performance Comparison, Scene 3 — F&B & Ancillary Revenue Contribution, Scene 4 — Guest Satisfaction & Review Analysis, Scene 5 — Seasonal Occupancy Patterns & Pricing Opportunities, Scene 6 — Strategic Recommendations for Revenue Growth.

Case Study 9

FitZone Gym - Member Retention & Revenue Analytics

Industry: Gym & Fitness

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

FitZone is a fitness chain with 20 branches across Tier-1 and Tier-2 cities in India. The chain offers gym memberships, personal training, group classes (Zumba, Yoga, CrossFit), and nutrition counseling. The management is alarmed by a 35% annual member dropout rate and declining personal training revenue. The marketing team wants IBM Cognos Analytics to identify at-risk members, understand class attendance patterns, and measure trainer performance.

Dataset / Data Available

- Member ID, Name, Age, Gender, City, Branch Name, Membership Type (Basic/Premium/Elite)
- Membership Start Date, Expiry Date, Renewal Flag (Yes/No), Dropout Flag, Dropout Month
- Classes Enrolled, Classes Attended, Personal Training Sessions, Nutrition Plan (Yes/No)
- Monthly Fee, Additional Services Revenue, Trainer Name, Member Satisfaction Score (1–5)

Case Study Questions

Q1 **[Reporting]** Create a Membership Report grouped by Branch and Membership Type showing Active Members, Expired Members, Renewal Rate %, and Dropout Count. Apply Conditional Styling: branches with Dropout Count > 50 in Red, 25–50 in Amber, < 25 in Green. Add Header with FitZone branding, Footer with page number and report date. Add prompts for Branch City and Membership Type.

Q2 **[Reporting]** Build an At-Risk Member Report listing members whose class attendance is below 4 sessions/month AND whose membership expires within 30 days. Add columns for Days to Expiry (calculated) and Risk Level (High/Medium based on attendance). Apply Conditional Styling for risk levels. Summarize total at-risk members per branch in the footer.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Branch Managers to select a chart type to view Monthly Class Attendance Trend for each class type (Zumba, Yoga, CrossFit). Add a Branch and Month filter prompt. Summarize the most popular class and peak attendance month. Use Blue for Yoga, Orange for Zumba, Red for CrossFit in Conditional Styling columns.

Q4 **[Exploration]** Use Cognos Exploration to analyze the FitZone member dataset. Explore whether Members with Personal Training sessions have higher renewal rates than those without. Investigate the relationship between Age Group, Gender, and Membership Type preference. Identify common characteristics of members who drop out within the first 3 months.

Q5 **[Dashboard]** Design a FitZone Operations Dashboard with: (1) KPI tiles — Total Active Members, Renewal Rate %, Monthly Revenue, Dropout Rate %, (2) A Bar chart for Members by Branch, (3) A Line chart for Monthly New Enrollments, (4) A Pie chart for Membership Type Distribution, (5) A table of Top 5 Trainers by Client Count. Add Branch and Month filter widgets.

Q6 **[Story Making]** Create a Cognos Story for FitZone's Member Retention Strategy Meeting: Scene 1 — Business Overview & Active Member Count, Scene 2 — Branch-wise Membership Performance, Scene 3 — Class Attendance Patterns & Popular Programs, Scene 4 — At-Risk Member Profile Analysis, Scene 5 — Trainer Performance & Impact on Renewals, Scene 6 — Retention Campaign Recommendations.

Case Study 10

ThreadCraft Textiles - Production & Sales Analytics

Industry: Garments & Textiles

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

ThreadCraft Textiles is a garment manufacturer and retailer with factories in Tirupur and Surat, and retail outlets in 15 cities. The company produces men's, women's, and kids' apparel sold under its own brand and as private labels for international brands. Operations management has identified issues with excess fabric waste, production delays, and inconsistent export order fulfillment. IBM Cognos Analytics is now being used to monitor production efficiency, sales, and export compliance.

Dataset / Data Available

- Product Code, Garment Type, Size, Color, Fabric Type, Factory Location
- Production Date, Units Planned, Units Produced, Units Rejected, Fabric Used (meters), Fabric Wasted
- Order Type (Domestic/Export), Buyer Name, Order Quantity, Delivered Quantity, Delivery Date
- Retail Outlet City, Units Sold, MRP, Selling Price, Revenue, Season (Summer/Winter/Festival)

Case Study Questions

Q1 **[Reporting]** Create a Production Efficiency Report showing Units Planned vs Units Produced vs Units Rejected by Factory Location and Garment Type. Add a calculated Efficiency % = (Produced / Planned) * 100. Apply Conditional Styling: Efficiency < 80% in Red, 80–90% in Amber, > 90% in Green. Add prompts for Factory and Season. Use Times New Roman font, size 11.

Q2 **[Reporting]** Build an Export Order Fulfillment Report showing Buyer Name, Order Quantity, Delivered Quantity, Fulfillment Rate % (calculated), and Delivery Status (On-Time/Delayed). Apply Conditional Styling: Delayed orders in Red bold. Add Header with ThreadCraft branding, Footer with 'Export Division Confidential'. Sort by Fulfillment Rate ascending to surface worst performers.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Sales Managers to select chart type (Bar or Pie) to view Revenue by Season and Garment Type. Add prompts for Retail City and Season. Summarize the best-selling garment type and peak season revenue as text annotations. Use Conditional Styling to highlight products with revenue below ₹1,00,000 in Amber.

Q4 **[Exploration]** Use Cognos Exploration to explore the relationship between Fabric Wasted and Units Rejected. Investigate whether certain Fabric Types or Factories have significantly higher waste rates. Also explore how Season and Garment Type influence Retail Sales Volume. Document your key findings with annotated charts.

Q5 **[Dashboard]** Design a ThreadCraft Operations Dashboard with: (1) KPI tiles — Total Units Produced, Production Efficiency %, Fabric Waste %, Export Fulfillment Rate, (2) A Bar chart for Revenue by Garment Type, (3) A Line chart for Monthly Production Trend, (4) A Pie chart for Order Type Split (Domestic vs Export), (5) An Alert table for orders below 80% fulfillment. Add Factory and Season filters.

Q6 **[Story Making]** Create a Cognos Story for ThreadCraft's Quarterly Production & Sales Review: Scene 1 — Company Overview & Production Summary, Scene 2 — Factory-wise Efficiency Analysis, Scene 3 — Fabric Waste & Rejection Root Causes, Scene 4 — Export Order Performance & Buyer Analysis, Scene 5 — Retail Sales by Season & Category, Scene 6 — Operational Improvement Plan.

Case Study 11

CodeVision IT Solutions - Project & Resource Analytics

Industry: Information Technology (IT)

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

CodeVision IT Solutions is a mid-sized IT company with 2,500 employees delivering software development, cloud consulting, and IT support projects to clients across the USA, UK, and India. The leadership team is concerned about project overruns, high employee attrition (especially in the 2–4 year experience band), and underutilized billable resources. IBM Cognos Analytics has been implemented to provide project health visibility, resource utilization insights, and attrition trend analysis.

Dataset / Data Available

- Employee ID, Name, Department, Designation, Experience (years), Technology Stack
- Project ID, Project Name, Client Name, Client Country, Project Type (Fixed/T&M), Start Date, End Date
- Planned Hours, Actual Hours, Budget (USD), Actual Cost, Billing Rate, Billable Flag (Yes/No)
- Employee Satisfaction Score, Attrition Flag, Exit Reason, Performance Rating (1–5)

Case Study Questions

Q1 **[Reporting]** Create a Project Health Report showing Project Name, Client, Budget vs Actual Cost, Planned vs Actual Hours, and Cost Overrun % (calculated). Apply Conditional Styling: Cost Overrun > 20% in Red, 10–20% in Amber, < 10% in Green. Add Header with CodeVision branding, Footer with 'Management Confidential'. Add prompts for Client Country and Project Type.

Q2 **[Reporting]** Build an Employee Attrition Report listing employees who left the organization in the current year with their Department, Experience Band, Exit Reason, and Performance Rating. Apply Conditional Styling to highlight employees with Performance Rating > 3 who left (unexpected loss) in Red. Summarize attrition count by department in the footer. Use Segoe UI font, size 11.

Q3 **[Reporting]** Using Report Visualize Prompt, allow HR and Finance Managers to select chart type to view Monthly Billable vs Non-Billable Hours comparison across departments. Add prompts for Department and Technology Stack. Summarize overall Billability Rate % and highlight departments below 75% billability using Conditional Styling in Amber.

Q4 **[Exploration]** Use Cognos Exploration to investigate what factors contribute to employee attrition at CodeVision. Explore relationships between Experience Band, Performance Rating, and Attrition. Also explore which Project Types (Fixed vs T&M) are more likely to exceed budget. Document top 3 attrition risk factors and top 3 project overrun predictors.

Q5 **[Dashboard]** Design an IT Operations Dashboard with: (1) KPI tiles — Active Projects, Overall Billability Rate, Attrition Rate %, Average Employee Satisfaction Score, (2) A Bar chart for Projects by Client Country, (3) A Line chart for Monthly Billable Hours Trend, (4) A Pie chart for Project Type Distribution, (5) An At-Risk Projects table (Overrun > 10%). Add Department and Client filters.

Q6 **[Story Making]** Create a Cognos Story for CodeVision's Quarterly Leadership Review: Scene 1 — Company Performance Overview, Scene 2 — Project Portfolio Health & Delivery Status, Scene 3 — Resource Utilization & Billability Analysis, Scene 4 — Employee Attrition Trends & Exit Analysis, Scene 5 — Client-wise Revenue & Profitability, Scene 6 — Strategic Recommendations on Retention & Project Governance.

KnowledgeHub Library - Circulation & Membership Analytics

Industry: Library Management

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

KnowledgeHub is a network of 10 public libraries operating across a city, managing over 1,50,000 books, journals, and digital resources. The Library Director has raised concerns about declining book circulation, low digital resource adoption, and high overdue return rates leading to penalties going uncollected. The administration wants IBM Cognos Analytics to track circulation performance, popular book categories, member engagement, and fine collection efficiency.

Dataset / Data Available

- Member ID, Member Name, Age Group, Membership Type (Student/Professional/Senior), Branch Name
- Book ID, Book Title, Author, Genre, Language, Publication Year, Format (Physical/Digital/Audio)
- Issue Date, Due Date, Return Date, Days Overdue (calculated), Fine Amount, Fine Paid Flag
- Branch City, Librarian Name, Renewals Count, Member Login Frequency (Digital), Member Satisfaction Score

Case Study Questions

Q1 **[Reporting]** Create a Book Circulation Report grouped by Genre and Branch showing Total Issues, Total Returns, Overdue Count, and Fine Collected. Apply Conditional Styling: Overdue Count > 50 in Red, 20–50 in Amber, < 20 in Green. Add a prompt for Branch Name and Genre. Include Header with library name and report period, Footer with page number. Use Book Antiqua font, size 11.

Q2 **[Reporting]** Build an Overdue Members Report listing Member ID, Name, Book Title, Days Overdue, Fine Amount, and Fine Paid Status. Apply Conditional Styling: Unpaid fines with Days Overdue > 30 highlighted in Red Bold. Add a calculated column for Outstanding Fine = Fine Amount where Fine Paid = No. Summarize total outstanding fines per branch in the report footer.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Branch Librarians to select chart type (Bar or Pie) to view Book Format Distribution (Physical / Digital / Audio) by Branch and Genre. Add prompts for Member Type and Month. Summarize the most borrowed genre and the branch with highest digital adoption as text objects. Use Conditional Styling to highlight genres with issues < 20 per month in Amber.

Q4 **[Exploration]** Use Cognos Exploration to analyze the KnowledgeHub dataset. Explore which Age Groups borrow the most books and which genres they prefer. Investigate whether Member Login Frequency for digital resources correlates with overall book borrowing. Also explore whether overdue behavior is linked to Membership Type. Document findings with visualizations.

Q5 **[Dashboard]** Design a Library Operations Dashboard with: (1) KPI tiles — Total Active Members, Books Circulated This Month, Overdue Rate %, Fine Collected ₹, (2) A Bar chart for Issues by Genre, (3) A Line chart for Monthly Circulation Trend, (4) A Pie chart for Book Format Distribution, (5) An Overdue Alert table for members with > 30 days overdue. Add Branch and Month filters.

Q6 **[Story Making]** Create a Cognos Story for the KnowledgeHub Annual Library Review: Scene 1 — Library Network Overview & Member Statistics, Scene 2 — Book Circulation Performance by Branch, Scene 3 — Top Genres & Popular Authors Analysis, Scene 4 — Overdue & Fine Collection Efficiency, Scene 5 — Digital Resource Adoption Trends, Scene 6 — Recommendations to Boost Circulation & Reduce Overdues.

Case Study 13

SpicePot Restaurant Chain - Sales & Customer Analytics

Industry: Food & Restaurant Chain

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

SpicePot is a multi-cuisine restaurant chain with 25 outlets across South India offering dine-in, takeaway, and home delivery. The operations head has observed that weekend peak hours are causing long waiting times, certain menu items are consistently underperforming, and delivery orders are increasing customer complaints due to cold food and long delivery times. IBM Cognos Analytics is being used to analyze sales, menu performance, and service quality.

Dataset / Data Available

- Order ID, Outlet Name, Outlet City, Order Type (Dine-In/Takeaway/Delivery), Order Date, Day of Week
- Menu Item, Category (Starters/Mains/Desserts/Beverages), Quantity Ordered, Item Price, Total Bill
- Order Time, Preparation Time (mins), Delivery Time (mins), Order Status (Completed/Cancelled)
- Customer ID, Customer Rating (1–5), Feedback Tag (Food Quality/Service/Delivery/Ambience), Waiter Name

Case Study Questions

Q1 **[Reporting]** Create a Menu Performance Report showing Menu Item, Category, Total Quantity Ordered, Total Revenue, and Contribution % to Total Revenue. Apply Conditional Styling: Items contributing < 1% to revenue in Red (consider removing). Add prompts for Outlet City and Category. Include Header with SpicePot branding, Footer with page number. Use Palatino Linotype font, size 11.

Q2 **[Reporting]** Build a Delivery Performance Report listing all delivery orders with Order Time, Preparation Time, Delivery Time, Total Time, and Customer Rating. Add a calculated field: Total Delivery Time = Preparation + Delivery. Apply Conditional Styling: Total Time > 60 mins in Red, 45–60 in Amber, < 45 in Green. Summarize average delivery time by Outlet City in the footer.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Outlet Managers to select chart type (Bar or Line) to view Hourly Order Volume Trends across different days of the week. Add prompts for Outlet Name and Order Type. Summarize peak hour, busiest day, and most popular category as text objects. Apply Conditional Styling to highlight hours with Cancelled orders > 10 in Amber.

Q4 **[Exploration]** Use Cognos Exploration to discover patterns in the SpicePot dataset. Explore the relationship between Order Type (Dine-In/Takeaway/Delivery) and Customer Rating. Investigate which Feedback Tags appear most frequently for Delivery orders and how they correlate with Delivery Time. Identify the top 5 best-performing menu items across all outlets and document findings.

Q5 **[Dashboard]** Design a SpicePot Operations Dashboard with: (1) KPI tiles — Total Revenue, Average Customer Rating, Order Cancellation Rate, Average Delivery Time, (2) A Bar chart for Revenue by Menu Category, (3) A Line chart for Daily Revenue Trend, (4) A Pie chart for Order Type Distribution (Dine-In/Takeaway/Delivery), (5) A Waiter Performance table by Rating. Add Outlet and Date filters.

Q6 **[Story Making]** Create a Cognos Story for SpicePot's Monthly Operations Review: Scene 1 — Chain-wide Sales & Order Overview, Scene 2 — Top & Bottom Performing Menu Items, Scene 3 — Delivery Performance & Complaint Analysis, Scene 4 — Customer Satisfaction by Outlet & Order Type, Scene 5 — Peak Hour & Demand Pattern Analysis, Scene 6 — Menu Optimization & Delivery Improvement Recommendations.

Case Study 14

SafeGuard Insurance - Policy & Claims Analytics

Industry: Insurance

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

SafeGuard Insurance Company offers health, life, motor, and property insurance products. The company's Claims Processing team has flagged that claim settlement is taking longer than the IRDAI-mandated 30-day period, rejection rates are higher than industry average, and fraudulent claims are rising. The Chief Actuary wants IBM Cognos Analytics to provide visibility into claims patterns, agent productivity, policy renewals, and fraud indicators to streamline operations.

Dataset / Data Available

- Policy ID, Policy Type (Health/Life/Motor/Property), Premium Amount, Policy Start Date, Renewal Flag
- Customer ID, Age Group, Gender, City, Agent Name, Agent Branch
- Claim ID, Claim Date, Claim Amount, Claim Type, Settlement Date, Days to Settle, Claim Status
- Fraud Indicator Flag, Rejection Reason, Customer Satisfaction Score, Agent Performance Rating

Case Study Questions

Q1 **[Reporting]** Create a Claims Settlement Report grouped by Policy Type showing Total Claims, Settled Claims, Pending Claims, Average Days to Settle, and Rejection Rate %. Apply Conditional Styling: Avg Days > 30 in Red (IRDAI breach), 20–30 in Amber, < 20 in Green. Add prompts for Agent Branch and Policy Type. Header must include SafeGuard branding; Footer must include 'Regulatory Document'. Use Arial font, size 11.

Q2 **[Reporting]** Build a Fraud Indicator Report listing all claims where Fraud Indicator = Yes, showing Claim ID, Customer City, Claim Amount, Claim Type, and Rejection Reason. Apply Conditional Styling: Claim Amounts > ₹5,00,000 flagged in Red Bold. Add a summary count and total suspicious claim value at the footer. Sort by Claim Amount descending.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Regional Managers to select chart type (Bar or Column) to view Monthly Claims Volume vs Settlement Rate. Add prompts for Policy Type and Date Range. Summarize months where settlement rate dropped below 70% using Conditional Styling in Amber. Add a text annotation of the top 3 settlement bottlenecks in the report.

Q4 **[Exploration]** Use Cognos Exploration to analyze SafeGuard's claims dataset. Explore whether Age Group or City correlates with higher claim frequency and fraud flags. Investigate the relationship between Agent Performance Rating and Claim Rejection Rate. Identify which Policy Types have the longest average settlement times and what drives the delays.

Q5 **[Dashboard]** Design an Insurance Operations Dashboard with: (1) KPI tiles — Total Active Policies, Claims This Month, Average Settlement Days, Fraud Cases Flagged, (2) A Bar chart for Claims by Policy Type, (3) A Line chart for Monthly Claims Trend, (4) A Pie chart for Claim Status Distribution (Settled/Pending/Rejected), (5) An Agent Performance table. Add Branch and Policy Type filters.

Q6 **[Story Making]** Create a Cognos Story for SafeGuard's Quarterly Regulatory & Operations Review: Scene 1 — Policy Portfolio & Renewal Overview, Scene 2 — Claims Volume & Settlement Performance, Scene 3 — Fraud Detection & Rejection Analysis, Scene 4 — Agent Productivity & Branch Performance, Scene 5 — Customer Satisfaction Trends, Scene 6 — Action Plan for IRDAI Compliance & Fraud Reduction.

Case Study 15

SwiftRoute Logistics - Delivery & Fleet Analytics

Industry: Logistics & Supply Chain

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario

SwiftRoute Logistics manages a fleet of 500 vehicles delivering goods for e-commerce, FMCG, and pharmaceutical clients across 20 states in India. Operations management is troubled by rising fuel costs, increasing delivery failures, vehicle breakdowns causing delays, and customer complaints about damaged shipments. The Fleet Manager wants IBM Cognos Analytics to monitor delivery efficiency, vehicle health, driver performance, and client SLA compliance.

Dataset / Data Available

- Shipment ID, Client Name, Client Industry, Origin City, Destination City, Route Name
- Vehicle ID, Vehicle Type (Truck/Van/Bike), Driver Name, Driver Experience (years)
- Dispatch Date, Expected Delivery Date, Actual Delivery Date, Delivery Status (On-Time/Delayed/Failed)
- Distance (km), Fuel Used (liters), Fuel Cost, Breakdown Flag, Damage Flag, Customer Rating (1–5)

Case Study Questions

Q1 **[Reporting]** Create a Delivery Performance Report grouped by Client Name showing Total Shipments, On-Time Deliveries, Delayed, Failed, and SLA Compliance Rate % (On-Time / Total * 100). Apply Conditional Styling: SLA Compliance < 85% in Red, 85–95% in Amber, > 95% in Green. Add prompts for Client Industry and Route Name. Add Header with SwiftRoute branding, Footer with 'Operations Confidential'.

Q2 **[Reporting]** Build a Vehicle Breakdown & Damage Report listing Vehicle ID, Vehicle Type, Driver Name, Breakdown Count, Damage Count, and Total Fuel Cost. Apply Conditional Styling: Vehicles with Breakdown Count > 3 in the month highlighted in Red. Add a calculated Fuel Efficiency column = Distance / Fuel Used. Summarize total breakdown cost impact in the footer. Use Trebuchet MS, size 11.

Q3 **[Reporting]** Using Report Visualize Prompt, allow Fleet Managers to select chart type (Bar or Line) to view Route-wise On-Time Delivery Rate across all 20 states. Add prompts for Vehicle Type and Month. Apply Conditional Styling: Routes with Delivery Failure Rate > 10% in Red. Summarize the top 3 problem routes and top 3 best routes as text annotations.

Q4 **[Exploration]** Use Cognos Exploration on the SwiftRoute dataset to analyze the relationship between Driver Experience and Delivery Failure Rate. Investigate whether certain Vehicle Types are more prone to breakdowns and how that affects SLA compliance. Explore the correlation between Distance and Fuel Efficiency. Document findings with annotated exploration charts.

Q5 **[Dashboard]** Design a SwiftRoute Fleet Operations Dashboard with: (1) KPI tiles — Total Shipments, On-Time Rate %, Breakdown Count, Total Fuel Cost, (2) A Bar chart for Shipments by Client, (3) A Line chart for Daily Delivery Volume Trend, (4) A Pie chart for Delivery Status Distribution, (5) A Driver Performance table by Rating. Add Route and Vehicle Type filters.

Q6 **[Story Making]** Create a Cognos Story for SwiftRoute's Monthly Fleet Review: Scene 1 — Operations Overview & Fleet Statistics, Scene 2 — Client SLA Compliance Performance, Scene 3 — Delivery Failure & Damage Analysis, Scene 4 — Vehicle Breakdown Trends & Fleet Health, Scene 5 — Driver Performance & Fuel Efficiency, Scene 6 — Route Optimization & Cost Reduction Recommendations.
